EDUCATION

B.E in Computer Engineering
A.P. Shah Institute of Technology
D.T.E, University of Mumbai
AUG 2018

Diploma in Mechanical Engineering
Maharashtra State Board of Technical Education, Thane
Jun 2015

Secondary School Certificate
Thakur Vidya Mandir High School
Mahrashtra State Board, Mumbai
Jun 2012

SKILLS

Languages
Python, Java, R, JavaScript, C#, Ruby, HTML/CSS, C, Clojure, C++, Scala, PHP & MySQL.

Framework/Environments
TensorFlow, Matlab, Nvidia CUDA, Keras, NodeJS, Scikit-Learn, Theano Deeplearning4j, Android, Rails, React.

AWARDS

Smart India Hackathon 2017
Awarded By

- **Ministry of Road Transport and Highways, Government of India.**
- **Persistent Systems Ltd.**

Apr 2017

EXPERIENCE

Data Scientist - NanoPrecise Sci Corp
• Developed prognosis systems applying research to filter, process and analyse vibration data streaming from multiple/ hybrid sensors.
• Predicted (RUL) Remaining Useful Life of industrial assets like rotating machinery and structures.

CERTIFICATION

Machine Learning Engineer Nanodegree
Amazon Web Services, Kaggle Certified - Udacity
• Mastered core fundamentals of Supervised Learning, Un-Supervised Learning, Deep Learning and Reinforcement Learning.
• Developed models based on Nvidia CUDA, Tensorflow, Keras, Caffe, Pytorch as project frameworks.

Android Developer Nanodegree
Google Certified - Udacity
• Designed by Google Developers team, extensively covers Advanced Android Architecture components, tools, principles and patterns that underlie all Android development.

PROJECTS

Earthquake Detection, Sensory Smartphone Network
• Tensorflow to process simulated time series data using LSTM.
• Background Android app to monitor fluctuation patterns and provide true positive predictions.
• Node JS server to receive and relay other devices within proximity to perform predictions upon trigger using Firebase.

Human Activity Recognition, Deep LSTMs on Android
• Realtime activity prediction on spatial data of Accelerometer.
• Trained model exported and used in Android app.
• Classification accuracy of 92% amongst six activities.

Credit Card Fraud Detection, Keras Autoencoders
• Deep Autoencoder on PCA Transformed data using Keras.
• Semi-supervised reconstruction of Non-Fraudulent transactions from unlabeled data for anomaly detection.

Predictive Keyboard, Recurrent Neural Networks
• Created a RNN model for predicting multiple word completions based on a few of previous character inputs.
• Used LSTM to learn structure of long term dependencies from input corpus using Keras.

Recommender System based on Customer Segments
• Un-supervised techniques on customers of distributors to identify customer segments concluding potential clients.
• Gaussian Mixture Model to identify soft complex clustering..
